

## **Victor® Fly Magnet™**

### Instructions

Fly traps are intended, primarily, for outdoor use -- the goal is to draw flies away from the home. Place several fly traps around outskirts of the home, 10-30 feet from home -- you will no longer have big fly problems inside the home.

Bait requires an activation period of 24 hours before it becomes fully effective.

It is important to keep bait moist by adding water to the trap regularly.

Flies search low - place fly traps 18" or less from the ground.

Flies like heat, light, low wind - place fly traps in sunny areas.

### **Directions:**

1. Open fly trap.
2. Empty contents into fly trap.
3. Add warm water until 1/4 full.
4. As traps fill, add water to keep flies submerged.
5. Swirl to mix.
6. Bait can be reused by removing dead flies and adding enough water to return liquid bait to fill line.
7. Replace bait when you notice a marked decrease in the number of flies caught in the trap.
